

Mosyle - Lock iPads into a Single Application

App Lock allows you to navigate and lock student devices into a specific application, preventing students from navigating to other resources or getting distracted during class time.

To apply App Lock:

- **1.** Select App Lock from the menu on the left
- **2.** Choose an app to lock student devices from either the list of Study Apps or by choosing an app from the App Store, Native Apps, or VPP
- **3.** Choose the duration to lock student devices in the app - the entire class period or a specific duration
- **4.** Click Apply App Lock

If you need to release student devices before the expected duration, simply click Disable App Lock.

Similar to other Class Manager features, you must Start the Class before using App Lock.

Students will not be able to exit the selected app. This ensures students are focused on the intended activity within the application.
