

Mosyle - Starting Your Class: 1:1 devices

In the Class area, select any tools you wish to enable immediately when starting your class:

Prepare the Classroom App

By default, this option will already be enabled in 1:1 models. This toggle ensures all devices receive the Educational Configuration profile required to use Apple's Classroom app.

Hide apps not listed on Study Apps

Select this option if you want to hide all applications installed on student iPads that are not listed in your Study Apps list. Remember: Toggling this in this area will enable the feature immediately after clicking "**Start Class**". Learn more about creating your list of Study Apps.

Apply my Study Sites

Select this option if you want students to only access websites listed in Study Sites.

Remember: Toggling this in this area will enable the feature immediately after

clicking "**Start Class**". Learn more about creating your list of Study Sites.

*Note: Many apps use multiple domains. Enabling Study Sites while also trying to use apps within the classroom could prevent proper functionality of apps.

Mute all Apps

Select this option to disable sounds and notifications for all apps installed on your student devices.

Class Duration

Before starting your class, it's important to set the duration of your class. This will ensure student devices are automatically released from any commands at the end of your class (in case you get busy and forget). Use the slider tool to set the length of your class (in minutes).

Tip: Sliding the selector to the left decreases the time, while sliding it to the right increases the class duration.

Taking Attendance

Recording absent students in Mosyle Manager ensures students who are not at school will not receive applied restrictions and management functions to their devices. This allows students to use their device in whatever way is needed while absent from school.

To record absent students:

- 1. Select a class period
- 2. Check the box next to each student you wish you mark absent in the area labeled **“Select The Absent Students”**

After starting the class, management rules will only be applied to the devices of present students.

You can edit the Attendance:

Ever have that student who shows up after taking attendance? No worries, you can modify the attendance at any time as needed.

- 1. Click **“Manage”** in the top right corner of the Class area
- 2. Choose any additional absent students or clear the selection of any absent students.
- 3. To save the updates, click **“Save”**.

After starting your class, next to the **“Class”** menu option, you’ll see a countdown timer indicating the time remaining in your class. If necessary, you can increase the duration of your class by clicking **“+10 min”**, or end the class before the expected time by clicking **“End Class”**.
